

LOTRYL[®] BESTPEEL 2008

LOTRYL[®] BESTPEEL 2008 is a ready-to-use thermoplastic composition designed to make peelable heat seal layers onto various substrates. The base resin is a random copolymer of ethylene and methyl acrylate, polymerized by high-pressure process in autoclave reactor. Modification is introduced to ensure the best processability in the different film technologies, and the suitable properties in heat sealing and peeling.

LOTRYL[®] BESTPEEL 2008 is used as top layer of laminates in order to provide the functions of heat sealability onto various substrates like PP, PS and PVC, and easy opening by interfacial peeling.

LOTRYL[®] BESTPEEL 2008 is easily processed using the technologies of coextrusion coating and cast film coextrusion to produce multilayer structures that can be used as lids, either directly or after lamination with other films.

For more detailed information and recommendations regarding your specific application, please contact your local SK Functional Polymer technical representative.

Typical Properties

	Test Method	Unit	Typical Value
Melt Index (190°C/2.16kg)	ISO 1133	g/10min.	7
Melting Point	ISO 11357	°C	79
Density	ISO 1183		1.05

The statements, technical information and recommendations contained herein are believed to be accurate as of the date hereof and cannot be used as product specifications. Since the conditions and methods of use of the product and of the information referred to herein are beyond our control, SKFP expressly disclaims any and all liability as to any results obtained or arising from any use of the product or reliance on such information; NO WARRANTY, EXPRESSED OR IMPLIED, IS MADE CONCERNING THE GOODS DESCRIBED OR THE INFORMATION PROVIDED HEREIN.

The information provided herein relates only to the specific product designated and may not be applicable when such product is used in combination with other materials or in any process. The user should thoroughly test any application before commercialization. Nothing contained herein constitutes a license to practice under any patent and it should not be construed as an inducement to infringe any patent and the user is advised to take appropriate steps to be sure that any proposed use of the product will not result in patent infringement. See SDS for Health & Safety Considerations.

Processing

LOTRYL® BESTPEEL 2008 contains mineral filler and consequently needs to be dried prior to extrusion. Typical drying conditions are 4 to 6 hours at 60°C.

LOTRYL® BESTPEEL 2008 is processed with standard polyolefin extrusion equipment. It is not corrosive and its processability is similar to that of LDPE. Temperatures can be chosen in a very wide range. Usual recommendations start from 170°C in film extrusion up to 290 °C in extrusion coating, thanks to the excellent heat stability of acrylate comonomer.

The composition of LOTRYL® BESTPEEL 2008 has been specifically designed to overcome the processing issues that are usually critical with tacky resins in film technologies, like chill roll release, blocking and slip properties. LOTRYL® BESTPEEL 2008 is proposed as a ready-to-use resin with outstanding processability at both extrusion and downstream stages.

Purging LOTRYL® BESTPEEL 2008 is readily achieved with LDPE, and it is recommended to do it before shutdown.

Storage, Handling & Safety

LOTRYL® BESTPEEL 2008 should be stored in a ventilated area, away from heat, humidity and direct sunlight. Improper storage conditions may cause degradation and could have consequences on physical properties of the product.

Safety data sheet as well as information on handling and storage of the LOTRYL® BESTPEEL 2008 are available upon request to your SK Functional Polymer representative or at www.sk-fp.com.

Shelf Life

Three years from the date of delivery, in unopened packaging. For any use above this limit, please refer to our technical services.
